

## Minutes of May 14 303(d) Public Meeting

The meeting convened at 10 a.m. in the Nightengale Conference Room of the DNR Lewis and Clark State Office Building. In attendance were: Rob Morrison (Barr Engineering Inc.), Phil Schroeder, John Ford and Rich Burdge (Missouri DNR, Water Pollution Control Branch).

The proposed 2012 Listing Methodology Document (LMD) was reviewed and the following comments were made:

- Rob Morrison: Footnote 14 could be improved by noting that additional information on assessment of the sediment quotient could be found in Table B-1. DNR agreed to make that change.
- Rob Morrison: Sediment contamination threshold values for individual contaminants are set at 150% of the PEL value, but sediment quotients are calculated using 100% of the PEL value. He suggested that to maintain the same threshold value as for individual contaminants, the calculation of the sediment quotient use 150% of the PEL value in the quotient calculation. DNR agreed this suggestion.
- Rob Morrison: McDonald has published a more recent paper on sediment criteria and he will send the citation for this paper to DNR.

### Action Items:

- DNR will edit footnote 14 in the 2012 LMD to include reference to Table B-1.
- DNR will edit the LMD to propose using 150% of the PEL value to calculate the sediment quotient..
- Rob Morrison will forward the citation for McDonald sediment criteria study to DNR.

The meeting adjourned at 10: 40 a.m..
